1. In a proxying server coupled to a client, a method of providing a document to the client, the method comprising the steps of:

providing the document to the proxying server, the document including image data and non-image data for causing the client to generate a display;

partitioning the document into a plurality of partitions;

downloading data of a first partition to the client; and

repeating a step of downloading data of a next partition to the client, the step of downloading data of the next partition to the client being performed after a step of downloading data of a previous partition to the client, the repeating step repeated until each one of the plurality of partitions has been downloaded to the client.
